SHARP®

MyFolder CONNECTOR

STREAMLINES YOUR BUSINESS PROCESSES

MyFolder

GO BEYOND SCAN TO FOLDER…

Take document scanning to the next level with the power and extensibility of Sharp OSA® technology. Using Sharp's MyFolder Connector, Sharp OSA-enabled Multifunction Products (MFPs) can now become an essential part of business processes in the organization.

You can scan and send your mission critical document to your shared network folder faster and in a more productive way with the MyFolder Connector. More conveniently, for IT administrators who want to simplify the scanning process and give users access to the "Home Folders", the Sharp MyFolder Connector is the solution.

With seamless integration to Microsoft® Active Directory®, authenticated users will have an access to shared network folders right from the operation panel of Sharp OSA-enabled MFPs. For security conscious organizations, network administrators have control of the options displayed on the operation panel through IT-friendly configuration utility. Furthermore, the MyFolder Connector supports Microsoft Active Directory login scripts* that automatically map shared drives once authenticated, just like logging on to a Windows® PC.

And now with the updated MyFolder Connector, you have exciting new features including an improved user interface and scanned image preview**.

Folder view for Sharp OSA3 and up enabled models

Scan Preview for Sharp OSA4.0 enabled models.

At-A-Glance

- **Scan directly to your home folder**

- **Browse network shares to locate folders**

- **Make new sub-folders on demand and rename files**

- **Browse network folders and print PDFs**

- **Quick and easy set-up**

- **Requires scanner user authentication**

- **Supports active directory log-in scripts**

- **Supports Windows security policies**

- **Preview scanned image (with Sharp OSA 4-enabled MFPs)**
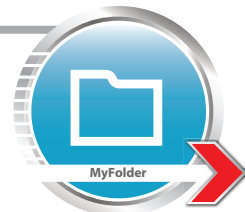

PRODUCTIVE SCAN TO FOLDERS

Scanning documents becomes easier with the MyFolder Connector. Users can easily scan to their home folder or network folders with the simplified user interface.
